1842 & 1843
CATALOGUE
 OF
**BULBOUS AND TUBEROUS ROOTED
 FLOWERS,**

OF THE MOST CHOICE AND SPLENDID VARIETIES,
 CULTIVATED AT THE

LINNÆAN BOTANIC GARDEN AND NURSERIES, FLUSHING,
 NEAR NEW-YORK.

William R. Prince & Co.

In addition to the immense stock under cultivation in the establishment, the proprietors make very large annual importations of the choicest new varieties from Europe. The following have been selected with great care from the finest foreign collections, and are remarkable for their size, beauty and peculiarity, and for the delicacy of their tints. In the selection no expense has been spared, and great exertions and large disbursements have been made, in order to obtain the most beautiful varieties of every class. It can, therefore, with the utmost confidence be asserted, that this collection is unrivalled in extent and variety. The whole are cultivated under the same names by which they were imported, and the prices are greatly reduced, and are lower than have ever before been offered to the public, the great increase of our stock enabling us to tender this advantage to purchasers. Those who purchase to re-vend, will be dealt with on the most reasonable terms; and where no wholesale prices are named, a deduction of 25 per cent. will be made from the retail prices.

At the conclusion of the present Catalogue the necessary directions are given for their culture, &c.

Where the prices are by assortment, or by the dozen, the selection of the varieties is to be made by the proprietors; but if applicants will name such as they already possess, those varieties will be omitted in the selection.

* denotes the earliest varieties, most proper for blooming in glasses or pots.

t denotes those that are tender.

DOUBLE HYACINTHS.

<i>Dark Blue and Purple.</i>

		kinds are desired.

SINGLE HYACINTHS.

In regard to Single Hyacinths an incorrect prejudice exists, arising from the fact that their peculiar merits are but little known. For *early flowering*, and particularly for *glasses or pots*, they are extremely desirable; they combine the most brilliant colours, and surpass the double varieties in the profusion of their bells. It may in fact be said that they precede the double varieties, and thus in a general collection extend the period during which we may enjoy the beauties and fragrance of this delightful class of flowers.

PÆONIES—*Pivoines*.

No class of flowers has lately attracted more attention in Europe than this, a menograph of which has been published in London. Every variety will support the winters of the United States and Canada. Most of the varieties are extremely splendid, and others possess striking peculiarities. Anticipating that a similar taste would be evinced in this country, the proprietors have, by great exertion obtained every variety possible.

N. B. For various other Bulbous and Tuberous rooted plants, see the other Catalogues. *Pæonies*, being tuberous rooted, can be packed in moss, and expedited in the same manner as Bulbous roots.

CARNATIONS, PICOTEES, &c.

The proprietors have the gratification to announce that they have, by great pains, and at great expense, at length succeeded in obtaining 130 varieties of the most splendid Carnations, and Picotees, that the European gardens possess, which added to their previous assortment, forms now a collection of above 200 varieties. In some cases they have imported a hundred plants without saving more than one to six alive. A distinct Catalogue of this magnificent collection will be sent to those who desire it,

PRIMROSES, POLYANTHUS, AURICULAS, AND CHRYSANTHEMUMS.

The collections of these delightful classes of flowers have been greatly augmented, and now form a combination of all the most esteemed varieties.

1842 & 1843.

PRINCES'
SELECT CATALOGUE
OF THE
MOST SPLENDID DOUBLE DAHLIAS.

This magnificent plant bids fair to rival in splendor and in diversity the famed Tulip and the Rose. Many of the varieties are inconceivably beautiful and interesting, and there seems a never-ending variation of color and form.

The numerous varieties combine the richest shades and most varied hues of which nature is susceptible, with every diversity in shape and magnitude, from the size of a small globe an inch and a half in diameter, to an expanded disk twenty-four inches in circumference! Most persons are not aware how simple are the means necessary to their preservation during winter. When the frost has destroyed the foliage, nothing more is required than to cut off the stalks two or three inches from the ground, and to take up the roots and put them in boxes of dry sand in a cellar or any other place free from frost, there to remain until spring, without further care. Indeed, the Proprietors have, for the five past winters, kept their stock quite dry and without sand.

The collection here offered is unrivalled in extent and beauty, and combines the most magnificent varieties of each class; it being a concentration of the most choice and interesting that could be selected from the principal establishments of Europe. The most of them have taken premiums at the Floral Exhibitions in Europe, and many of them were imported at a cost of one to five Guineas each, and very many at half a Guinea each. It will be perceived that the catalogue is particularly rich in the splendid Variegated, Striped, Mottled, and Shaded varieties, and others of the first class, and most vivid and brilliant colors.

Of the older kinds above 400 varieties are in our collection, but which have been omitted, from a desire to combine in the present catalogue, only the most select and to curtail its extent.

In addition to the usual course of obtaining the newest kinds offered for sale in the catalogues of foreign Florists, the proprietor has made arrangements with several amateurs abroad to furnish him with their most interesting varieties previous to their "*coming out*" in Europe; and it is to this arrangement that he is indebted for a large number of the very splendid varieties comprised in his catalogues of the last and present year, although obtainable nowhere else in our country. The present collection may with justice, therefore, be said to constitute the *acme* to which this favorite flower has yet attained. Other new varieties are continually accumulating, and Supplementary Catalogues, containing the additional kinds, will be published in March and October of each year.

Specimen beds containing many thousands of plants comprising two acres, are annually planed for the inspection of amateurs, which will be extended by additions of all the most choice new varieties that foreign countries and our own may present, thereby affording ample facilities for personal examination and selection, to those who desire it.

A large stock will be regularly cultivated in pots, so as to be ready for transportation at any period desired, and more than 10,000 dry roots and plants in pots can be delivered the present season. The dry roots can be supplied immediately, and will be packed so as to ensure success.

The plants in pots can be delivered after the 15th April, and can be transplanted successfully until the beginning of July, but they should not be planted until all frosts have subsided and the earth has attained a genial warmth.

It may be asserted without fear of contradiction, that at no period since the era of the famed Tulipo-mania, has the attention of the votaries of Flora been

so universally devoted to any flower as it now is to the Dahlia, the "Glory of the Autumn." To the varieties first cultivated, the objection was justly made that the expansion of their flowers commenced too late in the season to merit much estimation, but culture and judicious propagation have removed this difficulty as regards the new varieties. These commence blooming the middle of June, and continue until arrested by frost, our fine American autumn being particularly favorable to their development. The new varieties produce also a much greater profusion of flowers than the older sorts.

Rivalling as they do all other plants of the garden in their majestic appearance and gorgeous display, they also combine the merit of facility of culture to such a degree, that the most ignorant can scarcely fail of success; and, indeed, the day is not distant, when the number of varieties will surpass that of either the Hyacinth, the Tulip, the Rose, or the Carnation, and the numerous Striped, Variegated, and Mottled Dahlias, will then be designated under the various classes of Flakes, Bizarres, &c., in the same manner as the Carnation; the connoisseurs, without doubt, becoming quite as fastidious in regard to the formation of the petals, as they now are in respect to the last named flower.

A discount will be made to those who purchase largely, and to Nurseries and other venders as stated at the latter part of the present Catalogue, and it will also be perceived that the prices are much lower than usually charged, the great and increasing stock enabling us to offer them on these favorable terms, and also to select superior roots. The rates for assortments of Dahlias will be found at the end of the Catalogue.

It seems scarcely necessary here to add, that the deceptive practice of ingrafting the double varieties on roots of the single kinds, is never practiced by us.

Where the selection is left to us, such an assortment will be selected as will form a pleasing combination of color, form, height, &c. When packed dry, which can be done from October to May, they occupy so little space, that a great number may be comprised in a small compass; and they can be thus safely transported to any distance. During the residue of the year they can be transported in pots, or by enveloping the roots in moss, and packing them properly in accordance with the distance, &c.

All orders are to be addressed to WM. R. PRINCE, Flushing, New-York, and no other person in this town is authorized to receive any orders for this Establishment.

Dahlias in Assortments, &c.

Selections made by the Purchaser.

Where one dozen of roots are ordered, a discount of 25 per cent. will be made.

Where 50 roots are ordered, 30 per cent.

Where 100 roots are ordered, 33 $\frac{1}{3}$ per cent.

Selections made by the Proprietors, as follows; omitting such as the purchaser may already possess.

Superb double varieties, each 75 cents.

Double varieties, of kinds less rare, each 25 to 50 cents.

Some very superior new kinds, each \$1 and upwards as per catalogue.

Some very superior new kinds, \$8 to \$10 per doz. including many that are usually sold at very high rates.

Very fine assorted kinds, per dozen, each a distinct named variety, \$6.

Fine do. do. do. but less rare, \$4 50

Assortments, do. do. of the older varieties, \$3.

Mixed double varieties, \$2 50 per dozen.

Double Dahlias by the 100, 200, or 300, or more varieties, will be supplied at very low rates.

DAHLIAS IN ASSORTMENTS, &c.

Those who order assortments of Dahlias, to be selected by the proprietors, should state the kinds they already possess; in which case those varieties will be omitted. The prices are rated much lower on account of their retaining the privilege of sending such as they have the largest stock of; and in doing this, the purchaser receives quite as beautiful varieties as he could select himself, but at much less rates. It is the determination of the proprietors, that their customers shall be supplied, in all cases, on the most favorable terms. Dry roots can be supplied from October to May, and they will be packed so as to bear transportation safely any distance.

Directions for the Culture of Bulbous and Tuberous Roots.

Situation.—A southern aspect, dry and airy, and sheltered from the north winds, is preferable for most bulbs; but Anemones and Ranunculuses will do better in a situation commanding a southern aspect, and which can be protected from the heat of noonday.

Soil.—The following compost is most suitable for the Hyacinth, Tulip, Crown Imperial, Narcissus, Crocus, Snow Flake, Iris, Lily, Colchicum, Anemone, Ranunculus, Snow Drop, and most other bulbs:—One-third sand, one-third well-rooted cow-dung, and one-third good garden mould. Let the beds thus formed be well dug over to the depth of fifteen or eighteen inches, that the materials be well mixed together; a fourth part of rotten wood, or vegetable mould from a swamp, may be added to the above, if conveniently to be obtained, which will, at all times, be beneficial in giving additional lightness to the soil.

The various species of the Amaryllis succeed best in a rich sandy loam; and the families of the Ixia, Oxalis, FERIA, Gladiolus, Antholyza, Lachenalia, and most other Cape and Tropical bulbs, require the soil to be more sandy than for the generality of other bulbs.

Forming the Beds.—The beds should be raised about four inches above the level of the walks, and moderately arched, which will afford an opportunity for the superfluous moisture to run off. Sand (either sea or fresh) strewed in the trenches, before and after placing the roots, will be beneficial.

Time of Planting.—For the Hyacinth, Tulip, Crown Imperial, Squill, Lily, Polyanthus Narcissus, Double Narcissus, Jonquil, Iris, Crocus, Colchicum, Star of Bethlehem, Snow Drop, Snow Flake, Gladiolus, Allium, and most other hardy bulbs, the preferable season for planting is the months of October and November—and it is well to be observed, that the species of bulbs above named, (Tulips excepted,) will thrive best if not taken from the ground oftener than every second or third year. The different species of the *Feraria*, *Antholyza*, *Ixia*, *Crinum*, *Hæmanthus*, *Eucomis*, the tender species of *Amaryllis*, *Pancratium*, and *Gladiolus*, and most other delicate bulbs, may be planted during the months of November and December, in pots, when intended to be sheltered during the winter, or they can be kept in dry sand until April or May, and then be planted in pots, or in the open ground, when it has become free from frost, and perfectly settled.

Depth and Distance.—Hyacinths, Persian Fritillary, Martagon, and other Lilies, and *Pæonies*, should be planted at the depth of four inches; Crown Imperials and *Polyanthus Narcissus*, five inches; Tulips, Double and Single *Narcissus*, Jonquils, *Colchicums*, Snow Flakes, Bulbous Iris, and *Gladiolus*, three inches; *Crocus*, *Arums*, Small Fritillaries, and Snow Drops, two inches; *Ranunculus* and *Anemone*, one and a half inches; Dogstooth Violet, one inch; always measuring from the top of the bulb. The rows should be ten inches apart, and the roots be placed from four to six inches apart in rows, according to their size.

Protection during Winter—In the Middle and Northern States, it will on the approach of winter, be beneficial, though not absolutely necessary, to cover the beds with straw, tanners' bark, withered leaves, or light earth from the woods, (such as is formed by the decay of foliage,) to the depth of two or three inches, as it prevents any ill effects which a very severe season might have upon the roots. This covering must be carefully raked off early in the spring. The *Polyanthus Narcissus*, Hoop Petticoat *Narcissus*, and *Arum Dracunculus*, being more tender than other species, require a covering of five or six inches of straw or leaves in the manner above detailed.

Taking up Bulbs after Flowering.—About a month after the bloom is passed, the foliage puts on a yellow decayed appearance. This is the proper season for taking up the roots; on doing which, the stem and foliage should be cut off within an inch of the bulb, leaving the fibrous roots attached to it. After this preparation, spread them singly in an airy room to dry, for two or three weeks, then wrap each root carefully in paper, (the air being injurious,) or put them in dry sand, until replanted.

***Anemone* and *Ranunculus*.**—The soil should be compact and rich, not light or sandy. A stiff loamy soil suits them very well; and with it there should be mixed one fourth part of rotten manure, and, in doing this, the earth ought to be well pulverized. In England they are planted about the 10th of February; and here they may with success be planted as early in the spring as the ground can be worked. We have had them to succeed well when planted at the end of October, or early in November, and protected during the winter with a covering of straw or leaves, which was removed early in the spring. They will bear a considerable degree of cold, but our intense frosts destroy them when not protected as above. They require a moist soil, but not over much so. Heavy rains injure and rot them; and the ground selected should be such as does not retain water and become sodden. In dry weather, they will require frequent waterings. When the roots are taken up after blooming, they should be preserved in dry sand till replanted.

Culture of Tender Bulbs in pots, comprising the *Oxalis*, *Lachenalia*, *Ixia*, *Gladiolus*, *Antholyza*, etc. etc.—The management of these is extremely simple. They should have as much light, sun, and air, as possible, and be kept free from frost. When the foliage is past, and the roots consequently in a dormant state, they can be either left in the pots, in a dry situation, without watering, or be taken out and wrapped in paper, or packed in sand till the ensuing season, at which period they should be repotted in fresh soil, composed as already detailed.

Culture of the *Amaryllis* and *Tuberosa*.—The *Amaryllis longifolia*, (both rose colored and white,) is extremely magnificent, and will support our winters by planting the roots at the depth of six inches from the extremity of the neck of the bulb. A southern exposure is much to be preferred, the warmer the better. They will also flourish admirably if planted in a pond below the point of congelation. The *Amaryllis Formosissima*, *vitata*, *aurea*, *belladonna*, *equestris*, double and single; *reginæ*, *psittacina*, *Johnsoni*, *gigantea*, *ignescens*, and all the other spring, summer, and autumn flowering species may, if preferred, be preserved

during winter in boxes of dry sand, and planted out in the open garden at the end of April, or beginning of May, in a rich sandy loam, where they will bloom with the utmost splendor. The different species of *Zephyranthes*, *Crinum*, and *Pancratium*, will succeed admirably by the same course of culture. In planting the above-named roots, place the bulb so that one-third of its diameter will be above the surface of the ground. This is to apply to all, except the *Amaryllis Formossissima* or Jacobean Lily, which should have the bulb covered, leaving the neck only to project above the surface of the ground. *Tuberoses*, and the *Feraria tygridia*, or Tiger flower, should be planted at the depth of one inch, the numerous offsets on the former being first broken off to prevent their impoverishing the main root and arresting the bloom. The double and striped leaved *Tuberoses* are greatly admired; the latter of these, and the Common Single flowering, are more certain in their bloom than the double variety. The species of *Feraria* are exceedingly beautiful, and therefore much admired.

Hyacinths and other Bulbs in pots or glasses for winter blooming.—For this purpose Single *Hyacinths*, and those designated as earliest among the double, are to be preferred. The *Polyanthus Narcissus*, Italian, or Roman *Narcissus*, Double *Narcissus*, Double and Single *Jonquils*, Persian *Iris*, *Crocus*, the winter and spring flowering varieties of the *Cyclamen*, and the Double and Single *Duke van Thol Tulips*, make also a fine appearance during the winter season. Bulbs intended for blooming in pots during the winter, should be planted during the months of October and November, and left exposed to the open air until the ground begins to freeze, when they should be removed to the Greenhouse or to a warm room. They will need occasionally moderate waterings before they begin to vegetate, and when they attain to a growing state should receive a plentiful supply by pouring it into the saucers. They should at all times be exposed as much as possible to the sun, air, and light, to prevent their foliage from growing too long, or becoming of a yellow hue. Bulbs cultivated after this manner will mostly bloom in January, and next to the *Hyacinth*, the *Polyanthus Narcissus*, and Double Italian, or Roman *Narcissus*, may be ranked among the most desirable for beauty, fragrance, and easy culture.

Those intended for glasses should be placed in them about the middle of November, the glasses being previously filled with pure water, so that the bottom of the bulb may just touch the water; then place them for the first ten days in a dark room, to promote the shooting of the roots, after which expose them to the sun and light as much as possible. They will bloom, however, with little or no sun, but the flowers will be inferior in color. The water should be changed as often as it becomes impure, at which period the roots ought to be drawn entirely out of the glasses and rinsed in clean water, the glasses being at the same time well washed inside. Rain or soft water is preferable to that termed hard, but either will answer the purpose, provided it be perfectly clear. Bulbs that have been forced are of but little value, and require a considerable period to regain their natural vigor. When removed from the pots or glasses, they should be immersed in water for a week, and then planted in a soil properly prepared, where they will usually commence flowering again the second year.

Dahlia, or Georgina.—Few of our most rustic plants exact less care than this splendid native of Mexico. Indeed, so simple is its culture, that it is already widely disseminated in every part of Europe, as well as in the West Indies, South America, &c., in all of which it has been found to succeed. It will thrive in any good soil, but as is the case with other plants held in great estimation, amateurs bestow more care on its culture than is absolutely required, and have adopted particular rules for that object. The roots are tuberous, and towards the last of April they begin to push out young shoots at the base of the stem of the previous year. At this period, or in May, they should be planted; they will, however, succeed perfectly well if this is deferred till June, but will not come so soon into flowering. In England they usually, from choice, plant the *Dahlia* in poor, gravelly soil, in order to render it more dwarf in stature, and this course may have its advantage in a humid atmosphere. In our own country, however, where the heat of summer is excessive, and where we are sometimes visited by severe drought, the *Dahlia* would often be absolutely blighted, unless the soil were sufficiently rich and retentive of moisture. When planted in a generous soil, our climate is so extremely congenial to its habits, that it expands with the utmost luxuriance, attaining a degree of beauty in its development, if not unequalled, at least not to be surpassed.

The course we have adopted for its culture, although extremely simple, has been eminently successful, and the directions we shall now give are in accordance therewith. Make the ground mellow to the depth of eighteen inches, digging in

at the same time a liberal supply of manure. Plant the dwarf kinds at three, and the tall ones at four feet distant; and before placing the roots, dig in a shovel full of manure at the top of each hole destined to receive them. The root should be placed two inches beneath the surface—measuring from the base of the old stem. Most persons allow but one stalk to grow, and of course select the strongest—cutting away the weaker ones. When planted along a walk or avenue, a triple range presents a very beautiful appearance, the most dwarf being selected for the first row, those of greater stature for the second, and the tallest for the third row—indeed this manner of arrangement may be extended to five or six rows. Another mode is to plant them in clumps, either circular, square, or as the taste may suggest, the tallest varieties being selected for the centre. In either of these arrangements, a judicious selection of the various colors is requisite, in order to unite to their brilliant display, the advantage of a tasteful combination.

When the plants are about a foot high, a pole should be placed by each, proportioned to the usual height it attains, which should be driven into the ground about a foot from the stalk, so as not to interfere with the roots. The poles or stakes will necessarily vary from three to eight feet in height above the surface; and to be firmly placed, should penetrate the ground from twelve to eighteen inches. Those for the taller plants will require of course to be of greater thickness and strength than such as are designed for the more dwarf varieties. The work of driving the poles may be more easily effected immediately after a rain, when the ground is moist.

As the plants advance in growth, it will become necessary to tie the stalks firmly to the poles to guard against the effects of winds and storms. For this purpose, common bass matting, or any other soft ligature is to be preferred. The branches being extremely brittle, are subject to be broken in severe gales when not supported. Some persons train their Dahlias on a trellis, which affords security to every branch, and presents at the same time a fine effect. It is only in very exposed situations that the extreme caution is required of tying every branch; and in cities and in other well sheltered locations, far less care will suffice in this respect. It is deemed beneficial to trim off the lateral shoots nearest the ground, to a certain height in proportion to the growth of the plant; say for dwarfs twelve inches, and for other varieties eighteen, increasing to twenty-four inches for the tallest. Some cultivators thin out about half the number of upper branches, in order to add to the strength of the remaining ones, and to increase the size and beauty of the flowers.

Wintering Dahlias.—Our practice is exceedingly simple. As soon as the frost has killed the tops, we cut them off, and take up the roots, and dry them for two or three days in the sun, after which we place them on the shelves in a cellar, perfectly dry and free from frost, where they remain until the period for spring planting. Moisture is destructive to them, and in a damp cellar or room they are very liable to rot; but in a dry one not a single root will be injured, if it is kept free from frost.

The following method to preserve Dahlias through the winter, is sometimes adopted in Denmark. When the foliage and flowers of the plant have been destroyed in October, the stalks are cut down about a foot from the ground, and the earth drawn up round with a hoe. They stand thus until the beginning of November, (unless the cold should be so severe as to endanger the roots,) that the tubers may become as ripe as possible; they are then dug up and placed in a trench in the garden, with earth between them, and a layer of earth over them. A covering of sea-weed, horse manure or leaves, is then thrown over, sufficient to exclude the frost. Here they remain until the time of planting in spring. Dahlias thus wintered grow much stronger than those kept in the common manner. It is necessary that a dry spot be selected for their winter location.

REMARKS.—All orders for Fruit and Ornamental Trees, Greenhouse Plants, Bulbous Flowers, Dahlias, or Seeds, must be sent *direct to Wm. R. Prince & Co. or through a regularly authorised agent.* Every invoice transmitted by us will have a printed heading, and our signature, to prove it genuine, and we assume no guarantee whatever, where such an invoice cannot be produced. We mention these cautions for good and conclusive reasons, and we most particularly enjoin their strict observance on purchasers. When orders are sent, directions should be very precisely given how the packages are to be marked, and by what route or conveyance they are to be forwarded, &c. Orders from a distance will always receive the utmost attention, both as to packing and forwarding; and it is only requisite for persons sending orders, to specify the extent of land and water carriage, and the articles will be packed accordingly. The packages will be forwarded by such route as shall be designated, and where the option is left to

us, we will adopt such mode of transmission as shall be most economical and safe. During winter, when the northern rivers and canals are frozen, all packages destined for the Western States can be sent by the way of New Orleans, or via Philadelphia or Baltimore, to Pittsburgh or Wheeling.

The Proprietors have further to state, that their Fruit and Ornamental Trees, &c., are of *large size and of vigorous growth*. The Establishment contains at the present period *more than a million of Trees and Plants*, and the Proprietors are willing to enter into arrangements of the most liberal description both as to prices and discount, with all such persons as desire large quantities of Trees, &c., for the purpose of extending their collections, or to establish new Nurseries. Any persons who are desirous to act as agents for receiving orders for Trees, in towns where no agency at present exists, will please to communicate their views in regard thereto.

Any packages for us must be forwarded to New-York, and all letters should be transmitted by mail, post paid.

All Proprietors of Nurseries, and venders of seeds, &c., are invited to visit and inspect our Establishment.

BOOKS.—Prince's Treatise on Horticulture, 75 cents

NEW CATALOGUES, with reduced prices, which are distributed gratis, on application, *post paid*.

- No. 1. Fruit and Hardy Ornamental Trees, Shrubs, and Plants.
2. Bulbous and Tuberous rooted Plants, Double Dahlias, &c.
3. Greenhouse Trees, Shrubs and Plants.
4. American Indigenous Trees, Shrubs, and Plants
5. A Catalogue of Garden and Flower Seeds, with reduced wholesale prices
6. Do. do. do. in French.
7. A Catalogue of the most splendid Double Dahlias.

The Books and Catalogues can be transmitted by mail, at a postage of $1\frac{1}{2}$ to 2 cents per sheet.

N. B. The Proprietors will supply the following classes of plants in large or small Assortments, at very reduced rates.

Camellia Japonica, or Japan Rose, of 300 varieties.

China Roses, and other classes of Roses, comprising above 1000 varieties, and including all the new and choice kinds as enumerated in Catalogue No. 1, and also 40 very splendid new varieties of the Tea Rose, and 70 fine new varieties of the Chinese Daily, Nossotte, Isle de Bourbon, Microphylla, Banksii, and other choice Roses.

Geraniums, of 200 varieties, comprising above 100 that are *entirely new, and remarkable for the magnitude of their flowers, and for the brilliant and varied hues which distinguish them*.

Passion Flowers, of 30 species and varieties, including the different Scarlet flowering kinds.

Chinese Azaleas, of above 80 varieties, comprising the most brilliant colors, and which during their bloom in the winter months, present a display second only in brilliancy and variety of hues to the Camellia family.

Magnolia.—The entire collection comprising all the species and varieties known. Plants of the rare Thompsonia and Soulangiana varieties, of blooming size and at reduced prices.

Hardy Azaleas, of above 100 magnificent varieties, embracing the most choice and rare that could be selected from the collections of Europe and America.

Chrysanthemums, above 70 varieties; as enumerated in Catalogue No. 1, and at the low prices therein stated, and 30 new and very splendid varieties just imported and never before offered to the public.

Greenhouse Plants will be supplied in Assortments of 25, 50, or 100 or more pots, each a distinct species or variety, at very reasonable rates, and such omitted as the applicant already possesses.

Hardy Herbaceous Flowering Plants will also be supplied in assortments of 25 to 50 species, or more, at moderate prices.

Orders for Bulbous roots should be forwarded from September to December inclusive. In open winters they may be planted at any time when the ground is workable, and the bulbs have not grown too much.

Siddonia	Carmine, finely pencilled, beautiful	1 00
Sir John Sebright	Superb deep rose	75
Sylph	Splendid blush, with dark velvet spot	1 50
Sultan	Crimson purple, with fine black spot, superb	2 00
Tam O'Shanter	Rosy lilac, beautiful spot	75
Una	White, with crimson scarlet feather	1 00
Victory	Upper petals rich dark crimson, lower petals blush white, superb and distinct	2 50
Wildfire	Splendid scarlet	2 00

AZALEA BELGICÆ, INDICÆ, AND SINENSIS.

The greatest attention has been paid to a selection of the most splendid varieties of the above classes of the Azalea family, and the collection now comprises above 200 varieties, the most brilliant in color, and beautiful in development, a distinct Catalogue of which is now in preparation for amateurs. Twelve varieties, half of the Indica, and half of the Belgian varieties, will be supplied for \$8. Twenty-five varieties for \$12.

FRUIT TREES OF NEW AND RARE VARIETIES.

In addition to the immense assortment of the choicest Fruits of every class embraced in the 32d edition of the General Catalogue, we have obtained all the other noted Belgic varieties originated by Professor Van Mons and others, and all the most select varieties recently noticed and recommended by the London, and other European Horticultural Societies, and also every superior variety comprised in the collection of the late Robert Manning, a Supplementary Catalogue of which will be sent to those who desire it, and grafts as well as trees will be supplied.

In all cases, Specimen Trees are planted in our experimental orchards, and as nearly all the varieties contained in our Catalogues have borne fruit and been thus proven in our grounds, and many of them also in the grounds of our late esteemed friend Robert Manning, between whom and ourselves a continual correspondence has existed on the subject of our mutual experiments and discoveries, we do not hesitate to pronounce our collection of Fruits as unrivalled in accuracy and in excellence by any other in this country or in Europe.

We have prepared explanatory notes as to the qualities of the various fruits, which we shall give to the public ere long in a condensed work, far more comprehensive and at less expense than any work on Pomology that has ever yet appeared.

PRICES OF THE VARIOUS ARTICLES.

It is well known that there exists a considerable variation in the prices charged at the different Nurseries of the Union, and it is the determination of the Proprietors of this Establishment to supply all articles as cheap, and in most cases much cheaper than than they are obtainable elsewhere. It should nevertheless be understood that a similarity or diminution in price does not in all cases constitute cheapness. The first question to be considered by the purchaser is the genuineness of the articles, and this especially applies to Fruits, and to the most rare and valuable Flowering Shrubs and Plants. The second question should refer to the *size and vigor* of the respective Trees and Plants, there being an important difference to the purchaser whether these are well grown and of proper size, or on the other hand mere offsets or small specimens. It is in these highly important points that this ancient Establishment possesses preëminent advantages, derived from the abundant stock of strong and well-grown Trees and Shrubbery, and also from the opportunities which time and investigation have afforded for proving the accuracy and excellence of the Fruits, and the beauty and value of the Ornamental Shrubs, &c. We have only further to say that it is our determination that those who may deal extensively with us, shall find it to their interest to do so, as well in regard to the prices charged, as in many other important particulars.

CIRCULAR TO THE PROPRIETORS OF NURSERIES.

In addition to the Trees, Shrubbery, &c. of all kinds enumerated in our Catalogues, which are offered to you of the usual size at a liberal discount from the regular prices, we have on hand a very large stock of less size, from one year's growth upwards, which we will sell at diminished rates in proportion thereto. Where the quantity taken is large and not less than 12, or at the least 6 of any one kind, the proportionate trouble being thereby lessened, the prices will be put at the lowest rates. The same arrangement will be applied to all articles in the other departments, and a Catalogue rated according to size and quantity will be sent to applicants.

CAUTION.—A person by the name of Winter, and another by the name of Garretson, have been making use of the title of this Establishment without any authority, and the public are cautioned against the deception.
